# SKIN LAXITY OR SAGGING

Loss of skin firmness is a natural result of collagen depletion, slowed fibroblast activity, and gravitational changes with age. This manifests as sagging around the cheeks, jawline, and neck, softening facial contours and diminishing youthful definition. At Dermaluxe, we address these structural changes by stimulating collagen remodeling deep within the dermis to restore lift and elasticity. Treatments work at precise tissue depths to tighten and contract existing collagen while triggering new production for sustained firmness. The result is a naturally lifted appearance, improved contour, and a more resilient skin structure without surgical intervention.

Skin & Beauty Treatments

# WRINKLES

Skin & Beauty  
Treatments

Wrinkles form from repetitive muscle contractions, loss of dermal collagen, and oxidative stress that weakens skin support over time. Botox treatments relax targeted facial muscles, smoothing dynamic lines such as forehead creases, frown lines, and crow's feet. This not only softens existing wrinkles but also prevents deeper lines from forming by reducing repetitive movement. Beyond aesthetic benefits, treatment improves skin texture and enhances light reflection, giving a refreshed, rested look. Our approach prioritizes subtle, natural expression while preserving facial harmony.

# VOLUME LOSS

Skin & Beauty  
Treatments

Facial volume naturally decreases with age as subcutaneous fat, collagen, and bone support diminish, leading to hollow cheeks, sunken temples, and flattened midface contours. Restoring this lost volume is essential to re-establish youthful proportions and facial balance. Hyaluronic acid fillers and biostimulating injectables replenish structural support, lift sagging tissue, and smooth shadows that contribute to a tired appearance. Our technique enhances contour while preserving natural expression, achieving subtle yet impactful rejuvenation. With precise placement, volume restoration redefines facial architecture and restores softness and vitality.

# LIP ENHANCEMENT AND SHAPING

Skin & Beauty  
Treatments

The lips are central to facial harmony and expression, yet they naturally lose volume, definition, and hydration over time. Advanced filler techniques restore plumpness, enhance contour, and refine shape while maintaining natural movement. Beyond aesthetics, lip rejuvenation can correct asymmetry, improve balance between upper and lower lips, and enhance perioral hydration. Our approach focuses on anatomical precision and subtle artistry, tailoring results to complement each patient's facial proportions. The result is soft, defined, and youthful lips that elevate overall facial balance.

# DOUBLE CHIN & UNDEFINED JAWLINE

Submental fullness and poorly defined jawlines often result from stubborn fat deposits, skin laxity, and weakened structural support. Lipolytic injections target and break down excess fat cells, while collagen-stimulating treatments lift and tighten the overlying skin. This dual approach refines the jawline, reduces the appearance of a double chin, and restores a sharper facial profile. Treatments are customizable based on anatomical needs, ensuring a natural transition from chin to neck. The outcome is a more sculpted, contoured lower face with improved definition and balance.

## EYE REJUVENATION: EYEBAGS & DARK CIRCLES

Skin & Beauty  
Treatments

The delicate periorbital region is often the first to show signs of fatigue and aging due to thin skin, vascular changes, and volume loss. Treatments focus on stimulating collagen, improving microcirculation, and strengthening the skin barrier to reduce puffiness and pigmentation. Skin boosters and energy-based technologies restore elasticity, smooth fine lines, and brighten the under-eye area. By addressing the root causes—structural, vascular, and textural—results are more comprehensive and long-lasting. The eyes regain their youthful vibrancy, appearing rested, lifted, and refreshed.

# HAND AND LIP REJUVENATION

Hands and lips are among the most delicate areas where aging becomes visible early, as studies show collagen and hyaluronic acid naturally decline with time. This leads to thinning skin, fine lines, dryness, and loss of youthful definition. Because these areas are constantly exposed, even subtle changes can make them appear older than the rest of the face. At Dermaluxe, we approach hand and lip rejuvenation with precision, focusing on restoring smooth texture, balanced volume, and natural radiance. The results are hands that look elegant and refined, and lips that regain their softness and vitality—always in harmony with your natural beauty.
